

Experienced backend programmer with **5+ years of experience** in full-stack and backend development, with a focus on **Python, applied AI**, and application security. Adept at building the right context for large language model reasoning to drive real-world impact, through **agentic harnesses** using **LangGraph**, sandboxing, and automated verification pipelines to operationalize security signals. Combined with production experience in Node.js, Angular, Python/Django, and delivery of end-to-end solutions from **API design** and vector search to **containerization** and deployment.

Technical Skills

- **Backend & Languages:** Python, Django, Node.js, TypeScript, PostgreSQL, Redis, Celery, REST APIs
- **Applied AI & Agents:** LangGraph, Agent Harnesses, RAG Pipelines, Vector DBs (Qdrant), Feature Engineering
- **Security & Automation:** Security Testing Workflows, SAST/DAST Tooling, Mobile App Security, Vulnerability Analysis
- **Infrastructure & DevOps:** Docker, Kubernetes, CI/CD Integrations, Azure DevOps, Jenkins
- **Frontend** (Prior Experience): Angular, React, MEAN Stack

Work Experience

Appknox

April 2024 – Present

Software Development Engineer (SDE-2) | Python, Applied AI, Docker, Kubernetes, Qdrant, LangGraph

- **Engineered and deployed an AI-driven vulnerability validation platform** using LangGraph, automating SAST/DAST signal analysis to eliminate false positives for enterprise client workflows.
- **Built an automated remediation engine** translating complex vulnerability findings into context-aware code patches and actionable developer guidance.
- **Designing a Model Context Protocol (MCP) integration** to push automated security fixes directly into developer IDEs, closing the loop between threat detection and real-time code remediation.
- **Developed an AI-assisted pentesting framework** backed by sandboxed, containerized environments, allowing developers to execute guided dynamic security tests without requiring deep offensive security expertise.
- **Engineered a large-scale mobile threat intelligence pipeline** processing 3M+ applications across global app stores using metadata feature engineering, logo similarity models, and vector search.
- **Designed public-facing REST APIs and async worker architectures** in Python, allowing enterprise customers to seamlessly integrate automated security scans into custom CI/CD pipelines.

LTIMindtree

July 2021 – April 2024

Senior Software Engineer | MEAN Stack, Python, Azure DevOps, Jenkins

- Delivered **15+** product features using reusable component design, improving **development efficiency** and maintainability.
- **Optimized** APIs and database queries through **indexing**, query refactoring, **caching**, reducing response times by **-50%**.
- Integrated Microsoft Graph API, implemented unit testing, and resolved security issues to strengthen application stability.
- **Mentored** junior developers and interns, supporting onboarding and code quality improvements.

LifeSpark Technologies

Nov 2020 – June 2021

Embedded System and Machine Learning Intern | Python, EDA, Embedded C, Peripheral Interfacing

- Contributed to an ML-based **assistive prototype** for Parkinson's patients using IMU data and embedded system integration.

Education

- Vidyalankar Institute Of Technology | BE EXTC- **9.42 CGPA**

2017-21

Projects

- **AI-Assisted Mobile App Protection Analysis Tool | Python, Frida, LLM Workflows, Containerized Sandbox** Dec 2026
 - o Built **automated framework** to analyze Android apps for advanced runtime **protection** mechanisms like **RASP**, anti-tampering, instrumentation detection for large-scale security assessments.
 - o Combined APK analysis, **sandboxed** run, and **LLM-guided** UI interaction to trigger and observe protection behavior.
 - o Captures crash signals, UI changes, and behavioral responses to assess application security posture.
- **CodeHarbour | Python, React, Node.js, API Interfacing.** Dec 2023
 - o Developed an **interactive** web-based code editor with API-based compilation and execution support.
 - o Added collaboration-oriented features for sharing solutions and improving developer workflow.

Achievements & Certifications

- **Project Synergy Award – Appknox (2025):** Versatile contributions and strong collaboration across critical prod initiatives.
- **Airflow Fundamentals Certification:** Workflow orchestration and data pipeline concepts.
- **Appreciation Award – Creativity & Innovation (2022):** Recognized for technical contributions and problem-solving at work.
- **HackerEarth Deep Learning Challenge:** Ranked within top 100 participants.
